BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

Antisense oligonuclectides were designed to target human Fas. Oligonuclectides were synthesised as chimeric oligonuclectides and are useful for treating an animal having an autoimmune or inflammatory disease e.g., hepatitis, cancer, a condition associated with apoptosis, allograft rejection, or ischemia reperfusion injury. Optionally, the above mentioned conditions are prevented by contacting the allograft with the antisense oligonuclectides are used in diagnostics, therapeutics, prophylaxis and as research reagents and in kits. The oligonuclectides are also useful for research purposes. The present nucleotide sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4 Human Fas cDNA variants (AA734527-30) are derived from alternative splicing of Fas gene transcripts. They were identified following PCR amplification of CDNA derived from the peripheral blood mononuclear cells of systemic lupus erythematosus (SLE) and angloimmunoblastic lymphadenopathy (ALLD) patients and from healthy subjects. In comparison to the Fas gene (AA734526), variant Fas del3 (AA734529) has a deletion of nucleotides 391-637. This deletion causes frame shifting and an altered amino acid sequence (AAR99683).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 AAGAGAAAGGAAGTACAGAAACATGCAGAAAGCACAGAAAGGAAAACCAAGGTTCTCAT

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA detecting the level of expression of gene(s) (Gs) identified by the expression level in an unactivated comparing the expression level in an unactivated comparing the expression of Gs is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of Ga is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent that the expression of Ga is a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the subject to a pathogen or sterile inflammatory disease, by detecting the subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from GS, where

the level of expression of the gene is indicative of inflammation;

(4) treating (M5) an inflammation (especially chronic) or in a tissue,

con allegid response in a subject, exposure of a subject to a pathogen

or sterile inflammatory disease, by contacting a tissue having

inflammation with an agent that modulates the expression of gene(s)

con fine tissue. Mi is useful for detecting GGA; M2 is useful for

modulating GA; M3 is useful for screening an agent capable of modulating

GA preferably in an inflammation in a tissue; M4 is useful for

GA preferably in an inflammation of a subject to a pathogen or sterile

confercting an inflammation (especially chronic) in a tissue, an allergic

response in a subject, exposure of a subject to a pathogen or sterile

confercting an inflammation (especially chronic) in a tissue, an allergic

response in a subject, exposure of a subject to a pathogen or sterile

conferction phritis, asthma, thrombosis, cardiac reperfusion injury, RRDS, adult respiratory distress syndrome,

conferction phritis, asthma, thrombosis, cardiac reperfusion injury, renally periodontal disease; also bacterial infection, viral infection,

conferction, protozoal infection, fungal infection and M5 is

consequence represents a gene differentially expressed in granulocytes.

It was isolated from cDNA derived from the peripheral blood monouclear cells of systemic lupus erythematosus (SLE) and angioimmunoblastic lymphadenopathy (AILD) patients, and from healthy subjects, by PCR amplification. In addition to fas cobna, 4 other PCR products were obtd. (See also AAT357-30). These coded for soluble forms (AAR99682-85) of Fas antigen that are present at higher levels in SLE and AILD patients than the non-soluble Fas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 AAGAGAAAGGAAGTACAGAAAACATGCAGAAAGCACAGAAAGGAAAACCAAGGTTCTCAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4 Human Fas cDNA variants (AAT34527-30) are derived from alternative splicing of Fas gene transcripts. They were identified following PCR amplification of cDNA derived from the peripheral blood mononuclear cells of systemic lupus erythematosus (SLE) and angioimmunoblastic lymphadenopathy (ALLD) patients and from healthy subjects. In comparison to the Fas gene (AAT34526), variant Fas dell (AAT34528) lacks nucleotides 700-762 as a result of an exon deletion. The encoded protein (AAR99681) lacks the transmembrane region of insoluble Fas antigen (AAR99681). The cDNA can be used for prodn. of recombinant, soluble dell variant or as a specific probe.

transfected to a cell to express the fused gene and then an idlotype antibody is reacted with the expressed cell. The method is useful in medical, pharmacoutical, pharmacological and blochemical fields. The present sequence encodes a fusion protein designated apoptobodyisc, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This present sequence is a DNA clone encoding soluble Fas receptor (see AAW98070). The invention provides a method for inhibiting a proinflammatory response in a cell mixture by administering an immunosuppressive agent which inhibits the proinflammatory activit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of Fas ligand (Fast). In some embodiments, Fast is coadministered with the immunosuppressive agent, and the cell mixture comprises neutrophil cells. The method can be practised in vitro, ex vivo on the coadministry of the coad
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neutrophil cells. The method can be practised in vitro, ex vivo in vivo. Suitable immunosuppressive agents include antisense no vivo. Suitable immunosuppressive agents include antisense molecules that inhibit endogenous Fasi expression, soluble Fasi receptors, ribozymes that inhibit the endogenous expression of Fasi, drugs that inhibit Fasi signalling, agents that induce the endogenous expression of transforming growth factor (TGF)-beta, and polynucleotides coding for an immunosuppressive agent such as TGF-beta. The method can be used for treating diseases associated with an undesired Fasi-mediated proinflammatory response, e.g. graft versus host disease, or an autoimmune disease such as
rheumatoid arthritis; systemic lupus erythematosus; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  systemic lupus erythematosus, rheumatoid arthritis and psoriasis. The invention also provides a method for identifying agents which modulate FasL stimulation of a proinflammatory response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibition of proinflammatory responses - using an agent which modulates FasL stimulation, used for treating graft versus host

                                                                                                                                                                                                                                                                                                                                                                                     mRNA was obtd. from human lymphocytes and PCR was used to make cDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCR product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli DH5-alpha cells. insert sequence of pBluescript-Fas-delta-TM is given in AAQ93879.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fas receptor; Fas ligand; FasL; proinflammatory; immunosuppressive; graft versus host disease; autoimmune disease; psoriasis;

A CDNA library was prepared from polyA+ RNA from the human lymphoma cell line KT-3. The CDNA was ligated to BerXI-cut vector pCEV4 via BstXI linkers. The KT3 CDNA library was used to transfect monkey COS 7 cells which were "panned" in buffer containing murine anti-Fas Ab. The cells were "panned" on plates pre-coated with goat anti-mouse antibodies. The Fas-expressing cells adhered to the plates.

Extrachromosomal DNA was prepared from adhered cells and used to transform E.coli VMIO0 cells. A 520bp XhoI-BamHI fragment from a positive clone (pF3) was used to screen the KT-3 cDNA library. The longest cDNA clone was designated pF58 and contains an ORF correspond to a 35 amino acid pre-protein and a 319 amino acid mature protein
                                                                                                                                           (i.e. human Fas antigen).

The soluble Fas antigen is included in the immunoassay kit of the invention. The kit is for the assay of soluble Fas antigen and contains an immobilised anti-soluble Fas monoclonal antibody, as well as the standard soluble Fas antigen encoded by this sequence. The assay is simple and has high accuracy, high sensitivity, and is capable of assaying a number of different specimens at the same time. The immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmune diseases such as rheumatoid arthritis or systemic lupus erythematosus (SLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              824
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       884

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAATCTCCAACCTTAAATCCTGAAACAGTGGCAATAAATTTATCTGATGTTGACTTGAGT 884
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Apoptosis of lymphocytes can be triggered by the interaction of the cell surface receptor Fas and its ligand Fas. By interfering with this interaction, the method described and its preparations can prevent apoptosis of CD8+ TK lymphocytes caused by expression of Fasi. on activated CD4+ cells. Such Fasi-expressing activated CD4+ cells are especially the result of CD4+ cell infection with an immunodeficiency virus e.g. human immunodeficency virus (SIV). The claimed prevention of apoptosis may then allow annihumance/Fegeneration of cytocoxic T lymphocyte (CT1) activity towards the CD4+ cells infected with the infectious agent, enabling treatment (prophylactic and/or therapeutic) of immunodeficiency
                                                                                                                                                                                                                                                                                                         method of the invention. The method is concerned with reducing depletion of activated Fas-expressing CD8+ T-lymphocyte killer (TK) cells in an immune cell population which also comprises of Fas-ligand (FasL)-expressing activated CD4+ cells. It involves contacting this immune cell population with an effective amount of an agent (e.g. a soluble Fas-Fc fusion protein) which would interfere with the interestion between Fas and FasL. Therefore, the method is useful for identifying suitable agents which can reduce depletion of activated Fas-expressing CD8+ TK cells in immune cell populations. Also claimed is the use of the agent in the manufacture of therapeutic compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 AAGAGAAAGGAAGTACAGAAAACATGCAGAAAGCACAGAAAGGAAAACCAAGGTTCTCAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes human Fas (Apo-1). The specification describes antisense compounds which are targeted to the 5'-untranslated region, translational start site, translational termination region or 3'-untranslated region of nucleic acid molecules encoding Pas, Fas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense oligonucleotides for treating hepatitis and colon, liver or lung cancer are inhibitors of Fas, Fas ligand or Fas associated protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 AAGAGAAAGGAAGTACAGAAAACATGCAGAAAGCACAGAAAGGAAAACCAAGGTTCTCAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ligand (RasL), or Fap-1 (Fas associated protein 1, protein tyrosine phosphatase). The antisense compounds are used to inhibit the expression of Fas. FasL or Fap-1 in cells or tissues. They are used to treat autoimmune or inflammatory diseases such as hepatitis. They can also be used to treat cancer, especially colon, liver or lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                  Pas ligand, or Fas associated protein-1 (Fap-1). The inhibition of Fas mediated signalling is thought to be immunosuppressive, antinflammatory, hepatotropic, cytostatic and vasotropic. Antisense oligonucleotides were designed to target human Fas. Oligonucleotides were synthesised as chimeric oligonucleotides and are useful for treating an animal having an autoimmune or inflammatory disease e.g., hepatitis, cancer, a condition associated with apoptosis, allograft rejection, or ischemia reperfusion injury. Optionally, the above mentioned conditions are prevented by contacting the allograft with the antisense oligonucleotide. The
